

I'm not robot!

## How to beat plague inc fungus normal values chart pdf

There are some people who find Fungus to be difficult, so here is our guide for using Fungus on Megabrutal to eliminate humanity before 1 year. We have repeated this strat many times to refine it, there is always some variance, but our current record is 11 months. 11 months you say? How can such a slow pathogen do it in 11 months? Plague Inc. cAAA Fast Fungus Guide Also why is a shroom female? Well, the same way hurricanes are women cAAA You need certain genes to attempt this mission, not gonna lie. Maybe the rest can be fudged, but definitely Patho-Stasis (freeze ability costs). If you don cAAA have the genes, farm them by beating ten or so games with bacteria on casual. You get a new gene unlock for each game you win. Patho-Stasis: Ability costs don cAAA increase as you evolve more, therefore making Spore Burst cost only 1 DNA Darwinist: DNA is scarce on megabrutal, the free mutations will help although sometimes the wrong thing happens Urbophile: Heaviest resistance is expected from rich countries, and they cAAA are mostly urban, so we prep for that ATP Boost: Fungi is way too fast for any of the other genes to generate significant DNA advantage. ATP is not just DNA, it cAAA s DNA exactly when you need it cAAA the start of the game. Aquacyte: Greenland is not a problem for this guide (you cAAA ll soon see why). But there are still quite a lot of island nations which all have to die. Before we move on, we have to mention genes that got rejected, and why. Extremophile: A popular choice (who doesn cAAA t like a boost for all environments?). But who cares about a higher performance in Libya? We need the boost where it matters cAAA urban. Genetic Mimic: Cure percentage is irrelevant unless it cAAA s 100%. This is a speed guide, not a score guide. Creationist: We do not fear the mutation. We do not fear killing too early. We embrace it. Opening Okay now we start the plague and we cAAA are starting in Greenland. Greenland you say? Are you sure this is a speed guide? Greenland is normally Plague Plague Inc. by Ndemc It is it rightened to be like nucke .we can salee yobya sume . .Thoket ....It is the flameber . A quick note on Spore Hardening cAAA it does not mean the plague will cross closed borders / seaports, but just increases base transmission by x 100. The description is a lie. The Fungus still needs to travel via the normal air / water / land routes. Spore Hardening boosts the ultra-low Fungus spreading rates by a lot but it still ends up being less infectious than bacteria. Middlegame This is where play starts to diverge and you need to make choices based on your map. It is not good to follow a cookie cutter routine because your spores select random countries and you need to tailor to them. Your final Spore Eruption should have netted you a very hefty haul DNA because your disease is already lethal. Now you open the infections list and take note which countries got spored. Island nations like Madagascar, New Zealand, Iceland and Caribbean hit by spores is very very good Take note if your spores snagged a cAAA super spreadere cAAA like Saudi Arabia, China, or India. If you do, you evolve to the temperature (heat resistance) and the arid (air) / humid (water) of that country. Take note if you have a lot of rich countries. If you do, give higher priority to drug resistance. If you don cAAA t have super-spreaders or rich countries, you immediately move to Birds. Most guides only tell you what to do. (And they mostly be unhelpful like cAAA do everything, and you cAAA ll win.) But DNA is very limited on Megabrutal and more importantly we cAAA are going to tell you what not to do. Nearly every player knows about Air 1, Air 2, Water 1, Water 2, this is just out of habit and may not actually give good performance Fungus hates travelling on any kind of vehicle so Birds are actually the most reliable way to carry shrooms. The final ability, Spore Hardening, multiplies transmission x 100. Costing only 5 DNA, you need this one first before any transmission. It is often correct to start Drug Resistance or Heat Resistance before doing a single transmission, and sometimes, even their 2nd that's that before making transmissive. Your plague will not spread unless you have infected most of the natives, so you forget what you know about Bio-Aerosol. You have a lot of basic infectivity of symptoms. You are just doing the air thing about the air after your disease has won several paan. You do not need cold resistance, not even the noisy 1, because it inherited all this from greenlion. Battle, they are not to notice you and say that it is a worrying disease, because you have started killing people since day 1, but Shroom does not care, because they still need to waste time "" no threatening "and cAAA ferences" have eaten awareness "before the whole world begins to work in a cure. Most rich matters have only a few hundred / few thousands infected at this time, so that they are not bothered by serious research. Before the big fight, get the hardening of genes 1 and 2, while these things are still relatively cheap. The generational derivative in the megabrutal will end the evolution to cost more when its population is high. Then fill in your preparations for them ending with resistance to medicines 2. If you still have no heat resistant 2, you should also obtain it. It is measured that the world begins to accelerate for a cure (and they are very rough), now it is time to make water 2, air 2 and then Bio-Aerosol. If you already have transmissive, you probably made your plague, keeping the tabbit instead of reading your map as we said for you to do it. It is not correct to make air and water if you have a large and sick base, at least one super-sapanol and the correct resistant temperature of this spreader. The cheap padges for the fungus plague and are very much for land propagation. Mutaans will be happening and you love it, but if the failure of the rise or necrosis moves away from the last insular noise, it is returned. These great weapons with which everyone closes their ports. As soon as the plague gets to all islands (fungi of properties do not care), activates order 66 ... We mean, we fail to be. No wait 100 or 1000, 1 patient is sufficient, trust your spores. spores. is near max and boosted by mutations cAAA no country can resist except Greenland, which you wisely yeeted from the start of the game. Endgame Genetic Drift is expensive at this point, in fact, expect Organ Failure to cost more than 60 DNA. So you shall wait for most people to die before evolving more symptoms. Since you have Birds and Immune Suppression, and the Darwin gene, mutations are on their way to unlock symptoms without investment in DNA. You cAAA are a lucky shroom if they unlock Necrosis by themselves, that cAAA s 50+ DNA without spending and the Birds already paid for themselves several times over (something Air and Water will never do). The cure is going to speed way up but you do not panic. Once the cure is almost complete (10 days), block the humans with Coma or Genetic Reshuffle. Since this guide is all about the speed, do not further invest in any other blockers (Paralysis/Reshuffle 2) unless they almost get to the cure. Instead, evolve or mutate the Hemorrhagic Shock family to amp lethality to the max. Do it when the costs have been lowered from many people dying. The last few (million) people will die very fast and you should get the victory before a year is up, or sometimes a few days carryover. Depending on how lucky you were with mutations and spore burst, your score will be three or four stars. We cAAA ave never gotten five stars on Fungus mode, don cAAA t really believe it cAAA s possible because you need cure percentage to be low for that, and due to megabrutal difficulty, cure will always be above 50% even with max anti-cure measures. Also if you do a lot of anti-cure, you don cAAA t kill fast enough to murder the researchers, so they cAAA ll end up negating your anti-cure. You might as well forget about it and just focus on speed, like we do. More tips and tricks for Plague Inc. Do you have more Tips and Tricks for Plague Inc.? Then please get in touch in the comments. We will then steadily expand this article, to offer a comprehensive guide to the game. game. your your
